

February 26, 2018

Trenchless Structural Lining of Sewer Laterals on Greyabbey Trl from 220 Greyabbey Trl to 220 Greyabbey Trl

Contract: 17TW-OS-12CWD

Construction Window: Feb. 26 – Apr. 17, 2018

Time on the Street: 4-8 Days

The City of Toronto will be rehabilitating the City-owned portion of sewer laterals in your area during the above noted construction window. This project is part of the Council-approved Capital Works Program to renew our aging infrastructure, reduce the risk of leaks, and ensure continued long-term reliable sewer service.

MAP OF WORK AREA

WORK DETAILS

Relining of the sewer laterals is completed in four (4) separate phases as described below:

Phase 1 – Condition Assessment (1-2 Days)

- Inspecting the sewer laterals with a closed circuit TV (CCTV) camera to verify condition.

Phase 2 – Cleaning and Preparation (1- 2 Days)

- Flushing and cleaning the sewer laterals with high pressure water to remove any debris.
- Inspecting the sewer laterals with a closed circuit TV (CCTV) camera to verify that it has been adequately cleaned.
- Obtaining measurements of the sewer laterals for the purposes of manufacturing a custom structural liner for installation.

Phase 3 – Liner Installation (1-3 Days)

- Installing structural liners that will adhere to the existing laterals to form new pipe walls. This is called a cured-in-place pipe. During this time, the private side of the sewer lateral will be temporarily plugged and you will be asked to limit your water use.
 - **The City-hired contractor will provide you with a second notice 48 hours before this phase is scheduled to begin. This Notice will provide further information regarding sewer service disruptions.**

Phase 4 – Inspection (1 Day)

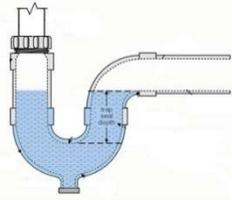

- Once the liner is cured, the laterals will be inspected with a closed circuit TV (CCTV) camera to ensure that there are no defects and that the laterals are fully operational.

Of note: Access to the sewer laterals is made through the main sewer from maintenance holes on the street and/or via a cleanout. If a cleanout/pipe needs to be installed/replaced, or a new connection is required, excavated areas will be restored with sod and/or asphalt during the restoration stage. See additional information regarding restoration below.

This public notice contains important facts regarding the rehabilitation of the sewer laterals in your neighborhood. Please keep this public notice until the end of the construction window.

WHAT TO EXPECT DURING ACTIVE CONSTRUCTION

	<p>Weekday Hours: Work will take place from 7:00 a.m. to 7:00 p.m., Monday to Friday.</p> <p>Please note, with approval from the City of Toronto, the following work schedules may be required as needed:</p> <p>Weekend Hours: In an effort to minimize traffic disruption and congestion, work may take place on Saturday and Sunday, between 7:00 a.m. and 7:00 p.m.</p> <p>Overnight Work Hours: In an effort to minimize traffic disruption and congestion, work may take place from 7:00 p.m. to 6:00 a.m., Monday to Friday.</p> <p>Note: Work will not take place on statutory holidays.</p>
-------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

	<p>Sewer Service Disruption: The contractor will need to temporarily seal/plug the private portion of your sewer lateral during Phase 3 of construction. During this time, you will be asked to limit the amount of water you use in order to avoid a sewer back up. This includes avoiding activities such as laundry, using your dishwasher, having a shower or bath, and limiting the number of times that you flush your toilet.</p> <p>The service disruption may last 1 to 2 hours. The contractor will hand deliver a second notice 48 hours before lining work begins that outlines the exact time the disruption will start and the time of completion.</p>
	<p>Construction Noise: You may experience intermittent noise and vibration during construction (from vacuum trucks, power generators, air compressors, etc.). All work will comply with the City of Toronto's Noise Bylaw.</p> <p>Plumbing Fixtures: Some plumbing fixtures (toilets, etc.) may make gurgling noises during this time.</p>
	<p>Odour: You may experience short-term odours while the sewer is being lined during Phase 3 of construction.</p> <p>Drain pipes are designed to retain water after use to help create a barrier that prevents odour from entering your home (see illustration to the right).</p>  <p><u>IMPORTANT:</u> Once you receive the contractor's 48-hour notice that lining work will begin, it is recommended that you pour at least one litre of water down every drain (i.e. sinks, showers, bathtub, floor drains).</p> <p>Throughout the duration of lining work, additional water may need to be added to ensure this barrier is present.</p> <p>If any type of strong odour is present in your home due to a dry drain or private plumbing issues, please call the contact number noted on the contractor's 48-hour notice for immediate assistance. Alternatively, you may contact the Field Ambassador indicated at the bottom of this notice.</p>
	<p>Road and Sidewalk Access: In order to complete the work in a safe manner, there will be road and sidewalk restrictions within the construction work zone. Access for emergency vehicles will be maintained at all times.</p> <p>Driveway Access: Typically, driveway access will not be restricted. If temporary restrictions to your driveway are necessary, the contractor will notify you directly in advance of the work.</p>

	<p>Traffic Management: Efforts have been made to manage traffic in the area for the safety of workers, road users and residents. Road users may experience delays as a result of increased traffic on nearby main and side streets if temporary road closures or lane reductions in the work area are required to complete the work safely.</p>
	<p>Parking: Parking in the active work zone is not permitted due to space requirements for construction equipment and materials. If your parked vehicle affects the construction work, it will be re-located with no charge to the owner. If your vehicle is moved, please contact parking control for its location at 416-808-2222.</p> <p>You may park outside of the inspection work zone. City Parking Officers will be advised not to issue tickets for “Parking in Excess of Three Hours” on affected streets. Tickets will be issued for all other violations, such as parking too close to a corner or fire hydrant and other restricted areas.</p>
	<p>Restoration: If excavation is required, the construction work area will be restored with sod, seed, concrete and/or asphalt where required. Interlocking bricks, flagstone on a granular base, or other similar features that are removed from public and private property during construction will be replaced. Lawn seeding and/or laying of sod will be done as needed during ideal growing seasons. Permanent restoration of the road and/or sidewalk (concrete) will take place within 18 to 24 months.</p>
	<p>Garbage & Recycling: Please follow your normal routine. If required, the contractor will move bins to an appropriate location and return them. <i>Please ensure that you label your bins with your address.</i></p>
